

SINGLE-INSTANCE
"What is the color of the paraglider?"

raw block mean (L16-26): the serialisation sink
arg-max coverage 1.00

after removing the item-independent component
arg-max coverage 1.00

DWA score (signed depth filter)
arg-max coverage 1.00

raw block mean (L16-26): the serialisation sink
arg-max coverage 0.00

after removing the item-independent component
arg-max coverage 0.00

DWA score (signed depth filter)
arg-max coverage 0.39

CROSS-INSTANCE
"Is the slide on the left or right side of the life buoy?"

Removing the sink = subtracting each layer's projection onto the item-mean map (the component that does not depend on the image), then renormalising. The border mass disappears; what is left is the region the question actually concerns. DWA reaches the same place by giving the sink-heavy late layers negative weight instead of subtracting a mean.
